

Profesor Łukasz Szumowski
Ministerstwo Zdrowia RP
ul. Miodowa 15,
00-952 Warszawa
Polska

Dear Professor Szumowski,

My late distant relative, Lieutenant General Sir Adrian Carton de Wiart VC, spent over ten very happy years living in your wonderful country between the two world wars. Our family has always had a huge respect for the Polish people and what they had to endure to gain their eventual freedom and sovereignty, not to mention the extremely important role that Polish pilots played in the Battle of Britain to frustrate and stop the planned Nazi invasion of our country.

Today, we are all up against a new and creeping tyranny, a global tyranny, that is now starting to emerge rapidly. The secretive and elitist corporate and central banking globalists, with their flawed and contrived UN Agendas 21 and 2030, are manoeuvring with blatant lies and deception to clamp down unlawfully on our most basic freedoms. A very important aspect to this is their rushed roll-out of SMART 5G technologies which are both highly invasive and extremely dangerous.

With this in mind, I was therefore shocked and saddened to learn that the Polish Ministry of Health has sanctioned an increase in the permitted levels of electromagnetic microwave radiation in Poland. This, in full knowledge of the fact that electromagnetic microwave radiation is a known carcinogen whose dangers to the well-being of man, animals, birds and insects is recognised in more than ten thousand independent peer reviewed scientific documents from scientists based all over the world.

Sanctioning an increase in existing 'known to be harmful' radiation levels goes directly against the Precautionary Principle enshrined in European law and recognised by all EU member states. What's more, this is being done to Polish citizens with grossly inadequate time being apportioned for public consultation which ultimately means that you are proceeding "without public consent".

The Polish public share, with all other EU States, 'the right to informed consent' as enshrined in UN Law. By proposing to push through this Act with grossly inadequate consultation, you are standing against fundamental democratic principles and a significant number of globally recognised International Conventions respecting fundamental human rights.

The exposure of citizens, and indeed the full spectrum of the natural environment, to non-ionised pulsed high-frequency radiation, such as that being directed by 5G, constitutes a breach of Human Rights. Turning your back on public concerns and supporting the telecommunication industry's rush to introduce 5G microwave irradiation - with absolutely no health checks being carried out into its safety - is a fundamental act of injustice that will not stand-up in a bona fide court of law.

I'm therefore urging you to please rethink your actions before taking any further steps. Aside from Polish citizens, many tourists from all over the World take great pleasure in visiting your Country each year. This may well be affected once it becomes widely known that permitted radiation levels in Poland have been allowed to far exceed genuine independent scientific guidelines.

With the greatest of respect, Professor, I now most urgently call upon you to place the health and safety of your country before the demands of an industry that is clearly rushing through a

deliberately untested technology that is internationally recognised for its capacity to be an acute danger to public health. As with defeating the Nazis, all of us must now come together to frustrate and defeat these corporate globalists before they get the upper hand and our ancient and essential freedoms become lost.

Your obedient servant, Sir,

Justin Walker
